

CSO Guide

How to log conduct attendance through the wizard after every conduct, so participation and safety numbers are accurate.

RESPONSIBILITY

After every conduct, log attendance through the wizard: who was on status, who fell out, who reported sick. The COS relies on your entry being **present** and **correct**. An unlogged conduct is a gap in the company's participation and safety record.

BEFORE SETUP

- Know the **conduct name**, **date**, **time**, and **programme**.
- Have today's **status personnel** and any fallout / report-sick noted.

LOG RUN THE WIZARD

- **Attendance** → **+ Log Conduct**.
- Confirm the pre-ticked **Status Personnel**.
- Add **Report Sick & Fallout** rows.
- Check the **auto totals**.

SEND CLOSE OUT

- **Save + Copy chat**.
- Paste the message into the chat.
- COS confirms the row exists.

A · CORE The Log-Conduct Wizard

One screen does the whole conduct. Open it from  **Attendance** → **+ Log Conduct** and work top to bottom. The app computes participation and totals for you.

- 1

Header: set **Date**, **Time (HHMM)**, pick the **Conduct**, and choose the **Programme** (PTP / BMT / Combined). The same conduct at a different time is its own entry.

- 2  **Status Personnel:** the app pre-lists everyone on a medical status today and **pre-ticks** them as not participating. **Untick** anyone who actually took part (e.g. an Excuse recruit who still ran). Add an optional reason.
- 3  **Report Sick:** add a row for anyone who **dropped out mid-conduct and went to the MO**. This auto-creates a **Pending** medical record for the COS to finalise.
- 4  **Fallout:** add a row for anyone who **dropped out but did not see the MO**.
- 5 **Totals:** set **Total Str** (defaults to programme strength). **Participating** is computed for you; **LMS** fills in after the Polar photo is imported.
- 6 **Remarks:** note any data caveat or recruit flag. Then  **Save + Copy chat**.

→ **Participating** is never typed. It's `Total - Status - Report Sick - Fallout`, recomputed as you edit. If it looks wrong, one of the lists above is wrong.

B · RULES Getting the Numbers Right

Status vs. Fallout vs. Report Sick

Status is a pre-existing MC/LD/Excuse. Fallout dropped out, no MO. Report Sick dropped out and went to the MO. Each person goes in one place.

Untick the ones who trained

An Excuse recruit who did the conduct is participating. Untick them, or the rate reads low.

Same conduct, different time is a new entry

Morning and afternoon sessions of the same conduct are two separate logs. Set the right time.

Report Sick flags the COS

Each Report Sick row creates a Pending medical record. Get the 4D and reason right; the COS finalises it after the MO.

Don't hand-count LMS

LMS fills from the Polar class-summary photo after import. Leave it; never fudge the number.

Commanders aren't counted

The status list and totals are recruit-only. Don't add commanders to conduct attendance.

C · FIX Editing a Conduct You Already Logged

Made a mistake, or the COS flagged a wrong total? Every logged conduct is editable. The wizard reopens with everything you entered.

- 1 Go to  **Attendance**, find the conduct row.
- 2 Tap  to reopen the wizard. Correct the ticks, rows, or totals.

3

Save. Saving replaces all child rows for that (date, time, conduct); the record is re-stated, not duplicated.

DUP **Never log the same conduct twice** to fix it. Edit the existing row. Two rows for one session double-count fallouts and corrupt the participation trend.

⇌ Handoff

CS0

Logs each conduct

Runs the wizard after every session. Report-sick rows auto-create Pending medical records.

COS

Verifies & finalises

Confirms every conduct has a row and totals make sense. Finalises the Pending medicals the MO decides on.

THE SYSTEM

Correct parade state

One out-of-camp rule, one set of totals. The parade state assembles itself and matches the ground.

Cougar Data System · CS0 guide. Log every conduct; edit an existing row, never duplicate.
