

COS Handover Guide

Duty procedures and the Cougar System: report sick, book out / book in, conducts, and the parade state.

For the incoming Company Orderly Sergeant. Read this once fully before your first duty, then use Section 9 (Quick Reference) day to day. App escalation point of contact: **Youqi**.

THE PRIME DIRECTIVE

The parade state generated by the app must be **100% accurate at all times**. Not at first parade, not when someone asks for it. At all times. Every person who steps in or out of camp, and every status a recruit gains or loses, is logged in the app **at the moment it happens**, not batched for later.

The only tolerated exception: a very minor discrepancy that will exist for exactly **one** parade state. For that single report you may hand-edit the generated text before copying it out. If a situation cannot be represented accurately in the app, or you are unsure how to log something, **contact Youqi immediately**. Do not improvise, and do not leave it wrong.

Everything in this guide serves that directive. The app derives strength, the ATTC list, and the out-of-camp list from what you log. If you log faithfully, the parade state writes itself and is always right. If you log lazily, every report you send is a guess.

1 Finding your way around

The app is a single page with a sidebar on the left (on your phone, tap  to open it). You will live in five places:

Tab	What you do there
 Dashboard	Generate the First / Last Parade State and the Medical Status List. See who is out of camp right now.
 Roster	Per-person book out / book in buttons. Manage  Groups .
 Medical	The Report Sick Log. Log every report sick, edit statuses when the MO outcome comes back.
 Out / Leave	Every book-out and leave record. Edit book-in dates here.
 Attendance	Log conduct attendance with the Log Conduct wizard.

The top bar has a search box (Search 4D or Name...) and scope filters (platoon, program, group). The  button at the top right is the sync status. See Section 8 for sync discipline.

2 Report sick: the full loop

This is your most frequent and most important workflow. It has app steps and physical steps. Steps marked **PHYSICAL** happen outside the app and are equally mandatory.

2.1 When a recruit reports sick

- 1 Log him in the Medical tab, status Pending.

Fill the form as below. Status is **Pending** because the MO outcome is not known yet. Leave Start and End blank; the app allows blank dates only for Pending and NIL.

- 2 **PHYSICAL** Have him sign the report sick book (sign in).
- 3 **PHYSICAL** Have him fill in the 40SAR report sick form at the Linktree: <https://linktr.ee/40SARInternal>.
- 4 **PHYSICAL** Compile the report sick list and send it to Dr. Nigel in the exact format in Section 2.2. Get the format right the first time; do not freestyle it.

Log Report Sick

RECRUIT

REC James Tan · C1108

DATE REPORTED SICK

15/05/2026

REASON

Fever 38.3, sore throat

Write it exactly like you will send it to Dr. Nigel: temperature first if taken, then symptoms.

LOCATION (ONLY IF REPORTED SICK OUTSIDE)

e.g. Lim Clinic and Surgery

STATUS

Pending

← select Pending (under "Awaiting MO")

START (INCLUSIVE) / END (INCLUSIVE)

leave both blank while Pending

Submit

Why Pending matters

Pending entries appear in the **REPORT SICK** section of the parade state on the day they are logged. That is how the company knows who is at the MO. When the outcome comes back you upgrade the same entry (Section 2.3); you never log a second one.

2.2 The report sick list to Dr. Nigel

Send the consolidated list in this format, and only this format. Header line is **DDMMYY C COY 40SAR HHMMH**. Cases are split into **URTI** (upper respiratory symptoms: sore throat, cough, runny nose, with or without fever) and **NON-URTI** (everything else, including fever or high temperature *without* respiratory symptoms). Counts and serial numbers are zero-padded to two digits, and serial numbers restart at 01 in each section. Each entry is **S/N**, **R/N** (rank, name, 4D), **REASON** (temperature first if taken).

150526 C COY 40SAR 0830H

URTI: 03

S/N: 01

R/N: REC James Tan C1108

S/N: 07
R/N: REC Adyl C4408
REASON: Fever

Cross-check this list against the Medical tab before sending: every name on the list must have a Pending entry in the app, and every Pending entry logged this morning must be on the list. If the two disagree, one of them is wrong. Fix it before sending.

2.3 When he comes back from the MO

1 **PHYSICAL** Ask him to send you (the COS) a photo of his MC / status chit. Cross-check what he tells you against the actual document. The document wins.

2 Press the  edit button on his row in the Medical tab and upgrade Pending to the actual outcome.

Change the **Status** dropdown from Pending to the real status and fill in **Start** and **End** (both inclusive, straight off the chit). The main statuses:

- **MC / Warded:** away from camp. Counted out of strength and listed under **ATTC**.
- **LD:** in camp, restricted. Listed under **MEDICAL STATUS**.
- **Excuse ...** (Heavy Load, Kneeling, Squatting, Uniform, RMJ, Swimming, Prolonged Standing, Upper Limb, Lower Limb): in camp, listed under **MEDICAL STATUS**.
- **NIL:** MO cleared him with nothing. Dates stay blank; the entry closes out cleanly.

If he got multiple statuses (for example 2D LD + 4D Excuse RMJ), press **+ Add another status** inside the same form. One recruit, one entry, multiple statuses.

If he got an MC but is consuming it in camp (staying in), tick **Consume in camp**. He then stays counted in strength and appears under **MEDICAL STATUS** instead of **ATTC**.

3 **PHYSICAL** Have him sign out of the report sick book.

4 **PHYSICAL** If his status warrants a yellow band, draw one and sign it out in the status band book. When the status ends, collect the band back and sign it in. The app does not track bands; the band book is the single record. Keep it as tight as the app.

Edit Report Sick Entry

RECRUIT

REC Dalson · C1203

REASON

Sprained Ankle

STATUS

LD

← was Pending

START (INCLUSIVE)

15/05/2026

END (INCLUSIVE)

16/05/2026

+ Additional status: Excuse Lower Limb · 15/05 to 21/05

Save

Statuses expire themselves. You do not close them.

A status is active while today is within Start and End (inclusive). After an MC or LD ends, the app shows a recovery tag (MC+1 , MC+2 , LD+1) for a day or two: the recruit is back at training but flagged for monitoring. You do not need to touch the entry again unless the MO extends or changes it, in which case you edit the dates.

SCENARIO

Recruit reports sick outside camp during his weekend

REC Amos messages you Saturday night: he saw a GP and got 2 days MC. Log it now, not Monday.

 **Medical** → **+ Log Report Sick**, fill **Location** with the clinic name (that is what the field is for), status **MC** with the dates from his MC photo. Sunday's and Monday's parade states are now already correct, and he appears under **ATTC** automatically. When he books in, the report sick book and band book steps happen then.

3 Book out and book in

Anyone physically leaving camp for any reason other than an active MC/Warded status must be booked out, and the record must end at the right time. One flow handles everything: the **Book Out of Camp** form.

3.1 The one form

Book Out of Camp

APPLY TO

One person...

Other options: Whole company (n) · Platoon 1..4 (n) · each program (n) · groups (n) · combined groups (n)

OUT OF CAMP FOR

Today only | Date range (leave)

Today only: counted out for the rest of today, automatically booked back in tomorrow.
Date range: logs a dated Leave / Out record with a Type, Start, End, and Days.

REASON / NOTES

MO / Appointment / NDP rehearsal...

Book out for today | Cancel

Today only is for same-day movements: sent out to a hospital, an appointment, an errand. It clears itself at midnight, so a person still away the next morning needs a fresh record (or should have been a date range in the first place).

Date range (leave) is for anything longer, with a Type: *Off-in-Lieu, Annual Leave, Compassionate Leave, Weekend, Night's Out, Course, Guard Duty, NDP, Other*. Start and End are inclusive: the person is counted out of camp for the whole of every day in the range, and back in strength from the day after End.

3.2 The four levers on a person's row

Button	When you press it
Book out	He is stepping out of camp. Opens the form above.
Book in	He came back from a same-day book-out before midnight. Reverses today's book-out so he counts present again now.
Book in anyway	He is on MC or leave in the app but is physically in camp today. Counts him present for today only (shows <i>In camp · manual</i>).
Undo book-in	You pressed one of the book-in buttons by mistake.

To change the dates of an existing leave record (early book-in, extended leave), go to **Out / Leave** and press on the record to open **Edit Leave/Out Entry**. Adjust End (and Days) so the app flips him back into strength on the correct day.

SCENARIO

MO sends a recruit out to CGH, with an escort commander

- 1 Book out the recruit, Today only.** Roster → his row →  → **Today only** → Reason: *Sent out to CGH from MO*. Strength is now correct while he is at the hospital.
- 2 Book out the escort commander the same way.** Reason: *CGH escort for C1203*. Commanders count toward strength too; an unbooked escort makes the **COMMANDERS** line wrong.
- 3 When the recruit's outcome comes back, update his medical entry.** Medical tab →  his Pending row → set **Warded** or **MC** with the actual dates. From tomorrow the medical status carries his absence in **ATTC**; the today-only book-out expires by itself at midnight, so there is no gap and no double-count.
- 4 Update the commander's book-in timing.** If he returns tonight, press  on his row the moment he is back so any report generated after that shows him in camp. If he stays overnight with the recruit, book him out again tomorrow morning (or log a Date range covering the stay).

SCENARIO

Recruit books out for a medical appointment

On the day of the appointment: Roster → his row → . If the appointment is already recorded in the app, the form shows  *Outside appointment today* and prefills the reason as **Appt:** **<reason>**. Keep **Today only** and submit. He appears in the parade state under **OTHERS** with an **(MA)** marker. When he books back in, press . If the appointment produced a new status (an MC, a new excuse), log it in the Medical tab exactly as in Section 2.3.

SCENARIO

Weekend: BMT stays in, PTP books out

- 1 Book out PTP as a block.**  **Out / Leave** → **+ Log** → **Apply to:** the PTP program → **Date range (leave)** → Type **Weekend** → Start Saturday, End Sunday. The app confirms the head-count and skips anyone already out (on MC, on leave); read that confirmation and make sure the number matches reality before pressing  **Log leave / out**.
- 2 Do nothing for BMT.** People staying in camp are never logged. Only movement is logged.
- 3 Book-in timing.** With End = Sunday, everyone counts back in strength from Monday 0000H, so Monday's First Parade State is automatically correct. During Sunday-night book-in, verify faces against the  **Out / Leave** list. Anyone who fails to book in gets his record extended (🔍 → push End date out) and gets chased; do not let the app say he is in camp when he is not.
- 4 Exceptions inside the block.** A PTP recruit staying in for the weekend: after the bulk book-out, press  **Book in anyway** on him for the days he is in, or 🔍 his individual leave record. A recruit returning early Sunday morning: 🔍 his record, End = Saturday.

SCENARIO

Night's out

The company gets an evening out, back by 2200H the same day. Use **Date range (leave)** with Type **Night's Out** (it is the same-day, evening-off-camp type), scope **Whole company** or the platoons going. At book-in, verify everyone is back; the records close themselves after the day ends.

Booking out people who are already out

Bulk book-outs automatically skip people already out via MC or leave, and tell you how many were skipped. If you try to book out one person who is already out, the app blocks you and says so. Never stack a second record on someone to "make sure": one person, one reason for being out. Double records are how strength counts go wrong.

4 Logging conduct attendance

Every conduct is logged through the wizard, immediately after (or during) the conduct.

Log Conduct

×

DATE / TIME (HHMM) / CONDUCT

16/05/2026 · 0730 · 8km Route March

PROGRAM / SCOPE

PTP

BMT

Combined

Narrower scope... (platoon / group / combined) dropdown below the pills. The scope drives the status list and Total Str.

STATUS PERSONNEL

☒
C1203 Dalson · LD + Excuse Lower Limb · *not participating*

Everyone in scope with an active status, auto-ticked (= not participating) if the status is restrictive. Tap a row to flip it if he actually takes part.

REPORT SICK

Dropped out mid-conduct AND went to the MO afterward. Auto-creates a Pending Medical row.

FALLOUT

Dropped out mid-conduct, did NOT go to the MO.

TOTALS

Total Str 45 · Status 3 · Rpt Sick 1 · Fallout 1 · Participating (auto) 40

Save + Copy chat

Cancel

- Header:** date, time in HHMM, and the conduct.
- Scope:** tap the program pill (or Combined), and narrow to a platoon, ☉ group, or ▣ combined group if the conduct is not program-wide. Scope determines both the Total Str and which status personnel appear, so get it right first.
- Status Personnel:** the wizard lists everyone in scope with an active medical status and auto-marks the restrictive ones (MC, LD, Excuses) as not participating. Review the list; tap a row to flip it. Add a short reason where useful.
- Report Sick vs Fallout:** *Report Sick* = dropped out and went to the MO; the app auto-creates a Pending Medical row for him, which you then manage exactly like any report sick (Section 2: book, Linktree, list to Dr. Nigel if applicable, then 📄 upgrade when the outcome is back). *Fallout* = dropped out, no MO. Use

+ Add

 per person, or

+ Add group

 to fan out a whole group.
- Check the totals card, then**

Save + Copy chat

. The WhatsApp-format message is copied for you; paste it into the conduct chat. To re-copy later, press on the conduct's row.

SCENARIO

Route march, one man down mid-march

PTP does an 8km route march. REC Shaun falls out at the 6km mark and is walked to the MO. In the wizard: scope pill **PTP**; the status list already shows Dalson (Excuse Lower Limb) auto-marked out; add Shaun under  **Report Sick**. On save the app tells you a Pending Medical row was created. That row is now a live report sick: report sick book, Linktree form, and when the MO gives him 2D LD you press  on the Medical tab and upgrade it. If you forget, tomorrow's parade state under-reports and the Prime Directive is broken.

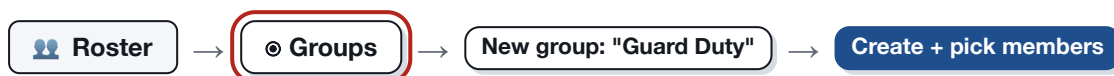

SCENARIO

Excused recruit insists he can participate

REC Qi Jun has Excuse Heavy Load, but today's conduct is a classroom lesson. The wizard auto-marks him as not participating because his status is restrictive. He is in fact sitting in the lesson: tap his row to flip him to participating. The auto-mark is a default, not a verdict; you confirm reality.

5 Groups

Groups are ad-hoc squads that cut across platoons (guard duty, details, rehearsal parties). Use them so bulk actions hit exactly the right people.

- **Groups**: name it, pick members, done.  **Members** edits membership later. Deleting a group does not touch the members.
- **Combined groups** mix platoons, programs, and groups with + and -. Tap a chip once to include (+), twice to exclude (-). Example: tap *P4*, then tap *Guard Duty* twice, and you get **P4 – Guard Duty**: all of Platoon 4 except the guard duty personnel.
- Groups appear as scopes in the **Book Out** form, in the **conduct wizard**, and as a filter in the top bar.

SCENARIO

Guard duty draw

Eight recruits from three platoons are drawn for guard duty at another camp, out Friday to Saturday. Create group **Guard Duty** with those eight. Book Out form → Apply to **Guard Duty (8)** → Date range → Type **Guard Duty** → Fri to Sat. For Saturday's PT you log the conduct with scope **P4 – Guard Duty** style combined groups where needed, so Total Str is right without hand-counting.

6 Generating the parade state

- 1 **Set Date and Time (HHMM).**
- 2 **Work the checklists.** The modal surfaces $\triangle$ *Borderline returnees: MC/Warded ended yesterday.* These people should be back in camp; tick anyone who has **not** actually booked in yet and they are kept in `ATTC`. It also surfaces today's appointments. This is the app asking you to confirm reality; answer honestly.
- 3 **Press ν Regenerate** if you changed anything, read the output top to bottom, then  **Copy to Clipboard** and paste into WhatsApp.

```
COUGAR COMPANY
FIRST PARADE STATE
DATE: 16/05/26 @ 0700
```

```
TOTAL STRENGTH: 120
CURRENT STRENGTH: 111
PLATOON 1: 27/28
PLATOON 2: 28/30
...
COMMANDERS: 14/15
```

```
ATTC: ...           ← MC / Warded, physically away
REPORT SICK: ...     ← Pending (at the MO, outcome unknown)
MEDICAL STATUS: ...  ← LD, Excuses, consume-in-camp MC
MEDICAL APPT: ...    ← upcoming appointments
OTHERS: ...          ← leave + book-outs (weekend, CGH, escort, appt)
```

Before you send any parade state, run this check:

- Does `CURRENT STRENGTH` match your physical count? If not, someone's movement was not logged. Find it and log it; do not massage the number.
- Is everyone in `ATTC` actually away, and everyone in `REPORT SICK` actually at the MO?
- Is `OTHERS` exactly the set of people who booked out?

The textarea is editable before copying. That is for the single-parade-state exception only (a typo in a reason, a movement that happened 5 minutes ago and resolves within the hour). Anything that would need the same hand-edit twice must be fixed in the data, and anything you cannot fix in the data goes to **Youqi**.

The same menu gives you the  **Medical Status List** and  **MSK Report** when asked for them.

7 How the app counts strength (know this cold)

A person is out of camp today if and only if one of these three is true:

1. An active **MC or Warded** status covers today (and is not marked Consume in camp). → shown in `ATTC`.
2. An active **leave / out record** covers today ($\text{Start} \leq \text{today} \leq \text{End}$). → shown in `OTHERS`.
3. A **same-day book-out** was pressed today. → shown in `OTHERS`; clears at midnight.

`CURRENT STRENGTH` = `TOTAL STRENGTH` minus everyone matching the above. Therefore: every wrong parade state is one missing or one stale record in exactly one of those three places. When a number

looks off, check Medical, then Out / Leave, then today's book-outs, in that order.

8 Sync discipline

- Edits save locally first. Watch the  sync status at the top right; where a tab offers a **Push to Sheet** action after edits, use it.
- Do not generate a parade state while your last edits are still unsynced on another device. One device, log, sync, then generate.
- If sync looks stuck or two devices disagree, stop editing and contact **Youqi**. Do not "fix" a sync conflict by re-typing entries; that creates duplicates.

9 Quick reference

When this happens	You press / do
Recruit reports sick	Medical → + Log Report Sick → status Pending , dates blank. Sign report sick book. Linktree form. Send list to Dr. Nigel in format.
He returns with MC / status	Get chit photo, cross-check. Medical → → real status + Start/End (use + Add another status for multiples). Sign out of book. Band book if applicable.
MO clears him with nothing	Medical → → status NIL . Sign out of book.
MC consumed in camp	Status MC + tick Consume in camp (counts in strength, listed under MEDICAL STATUS).
Sent out to hospital (CGH) from MO	Book out recruit Today only + book out escort commander. Later: medical entry to MC/Warded; Book in the commander when back.
Medical appointment outside	Book out (reason prefills Appt:), Today only. Book in on return. Log any new status.
Weekend book-out (partial company)	Out / Leave → + Log → scope = the program/platoon/group going out → Date range → Type Weekend . Stayers: log nothing. Verify at book-in; records for stragglers.
Person on leave/MC is physically in camp	✓ Book in anyway (today only, shows In camp · manual).
Leave dates change (early/late book-in)	Out / Leave → → adjust End (and Days).
Conduct happens	Attendance → + Log Conduct → scope → review Status Personnel → Report Sick / Fallout → Save + Copy chat .
Fell out mid-conduct, went to MO	Wizard Report Sick section (auto-creates Pending) → then full report sick loop.
Fell out mid-conduct, no MO	Wizard Fallout section.
Ad-hoc squad (guard duty, detail)	Roster → Groups → create, pick members. Use as scope everywhere.
FP / LP due	Dashboard → Generate Report ▼ → answer Borderline returnees honestly → verify strength vs physical count → Copy.
Anything the app cannot represent	Contact Youqi . Do not improvise.

HANDOVER STANDARD

You hand over duty with: the app matching physical reality exactly, the report sick book and band book reconciled against the Medical tab, and zero unlogged movements. The incoming COS should be able to generate a parade state in their first minute of duty and send it without checking anything. That is the standard, because that is what you received.
