

COS Handover Guide

Duty procedures and the Cougar System: report sick, book out / book in, conducts, and the parade state.

For the incoming Company Orderly Sergeant. Read the whole guide once before your first duty. After that, use Section 9 (Quick Reference) day to day. If the app cannot handle something, contact **Youqi**.

THE ONE RULE

The parade state from the app must be **100% accurate at all times**. Not just at first parade. At all times. Log every move in or out of camp **the moment it happens**. Log every new status the moment you learn of it. Do not save entries up for later.

There is one exception. A very small error that will last for exactly **one** parade state may be fixed by hand in the report text before you copy it. Nothing else. If you cannot log a situation correctly, or you are not sure how, **contact Youqi at once**. Do not guess. Do not leave it wrong.

Everything in this guide serves that rule. The app builds strength, ATTC, and the out-of-camp list from what you log. Log well and the parade state is always right. Log late and every report you send is a guess.

1 Finding your way around

The app is one page with a sidebar on the left. On your phone, tap  to open it. You will live in five places:

Tab	What you do there
 Dashboard	Generate the First / Last Parade State and the Medical Status List. See who is out of camp right now. Book and track medical appointments.
 Roster	Per-person book out / book in buttons. Manage Groups .
 Medical	The Report Sick Log. Log every report sick here. Edit the status when the MO outcome comes back.
 Out / Leave	Every book-out and leave record. Edit book-in dates here.
 Attendance	Log conduct attendance with the Log Conduct wizard.

The top bar has a search box (Search 4D or Name...) and filters for platoon, program, and group. The  button at the top right shows sync status. See Section 8.

2 Report sick: the full loop

This is your most common and most important task. It has app steps and physical steps. Steps marked **PHYSICAL** happen outside the app. They are just as mandatory.

2.1 When a recruit reports sick

- 1 Log him in the Medical tab, status Pending.

Fill the form as shown below. Status is **Pending** because the MO outcome is not known yet. Leave Start and End blank. Blank dates are allowed only for Pending and NIL.

- 2 **PHYSICAL** Have him sign the report sick book (sign in).
- 3 **PHYSICAL** Have him fill in the 40SAR report sick form at the Linktree: <https://linktr.ee/40SARInternal>.
- 4 **PHYSICAL** Compile the report sick list and send it to Dr. Nigel in the exact format in Section 2.2. Get the format right the first time.

Log Report Sick

RECRUIT

REC James Tan · C1108

DATE REPORTED SICK

15/05/2026

REASON

Fever 38.3, sore throat

Write it the way you will send it to Dr. Nigel: temperature first if taken, then symptoms.

LOCATION (ONLY IF REPORTED SICK OUTSIDE)

e.g. Lim Clinic and Surgery

STATUS

Pending

← select Pending (under "Awaiting MO")

START (INCLUSIVE) / END (INCLUSIVE)

leave both blank while Pending

Submit

Why Pending matters

Pending entries show in the **REPORT SICK** section of the parade state on the day you log them. That is how the company knows who is at the MO. When the outcome comes back, you upgrade the same entry (Section 2.3). Never log a second one.

2.2 The report sick list to Dr. Nigel

Send the list in this format and no other. The header line is **DDMMYY C COY 40SAR HHMMH**. Split cases into **URTI** and **NON-URTI**. URTI means upper respiratory symptoms: sore throat, cough, runny nose, with or without fever. Everything else is NON-URTI, including fever alone. Zero-pad counts and serial numbers to two digits. Serial numbers restart at 01 in each section. Each entry has **S/N**, **R/N** (rank, name, 4D), and **REASON**, with temperature first if taken.

150526 C COY 40SAR 0830H

URTI: 03

S/N: 07
R/N: REC Adyl C4408
REASON: Fever

Check this list against the Medical tab before sending. Every name on the list needs a Pending entry in the app. Every Pending entry from this morning must be on the list. If they disagree, one of them is wrong. Fix it before you send.

2.3 When he comes back from the MO

1 **PHYSICAL** Ask him to send you (the COS) a photo of his MC / status chit. Check what he tells you against the document. The document wins.

2 Press the  edit button on his row in the Medical tab and change Pending to the actual outcome.

Change the **Status** dropdown from Pending to the real status. Fill in **Start** and **End**, both inclusive, straight off the chit. The main statuses:

- **MC / Warded:** away from camp. Not counted in strength. Listed under **ATTC**.
- **LD:** in camp, restricted. Listed under **MEDICAL STATUS**.
- **Excuse ...** (Heavy Load, Kneeling, Squatting, Uniform, RMJ, Swimming, Prolonged Standing, Upper Limb, Lower Limb): in camp. Listed under **MEDICAL STATUS**.
- **NIL:** MO cleared him with nothing. Leave the dates blank. The entry closes on its own.

If he got more than one status (for example 2D LD + 4D Excuse RMJ), press **+ Add another status** in the same form. One recruit, one entry, many statuses.

If he got an MC but stays in camp to consume it, tick **Consume in camp**. He then counts in strength and shows under **MEDICAL STATUS** instead of **ATTC**.

3 **PHYSICAL** Have him sign out of the report sick book.

4 **PHYSICAL** If his status needs a yellow band, draw one and sign it out in the status band book. When the status ends, collect the band and sign it back in. The app does not track bands. The band book is the only record. Keep it as tight as the app.

Edit Report Sick Entry

RECRUIT

REC Dalson · C1203

REASON

Sprained Ankle

STATUS

LD

← was Pending

START (INCLUSIVE)

15/05/2026

END (INCLUSIVE)

16/05/2026

+ Additional status: Excuse Lower Limb · 15/05 to 21/05

Save

Statuses expire on their own. You do not close them.

A status is active from Start to End, both inclusive. After an MC or LD ends, the app shows a recovery tag (MC+1 , MC+2 , LD+1) for a day or two. The recruit is back at training but watched. Leave the entry alone unless the MO extends or changes it. In that case, edit the dates.

SCENARIO

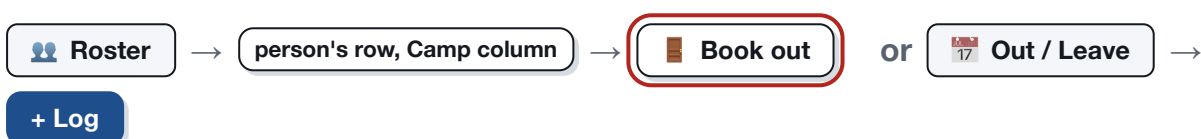

Recruit reports sick outside camp during his weekend

REC Amos messages you on Saturday night. He saw a GP and got 2 days MC. Log it now, not on Monday.  **Medical** → **+ Log Report Sick**. Put the clinic name in **Location**. That is what the field is for. Set status **MC** with the dates from his MC photo. Sunday's and Monday's parade states are now correct, and he shows under **ATTC** on his own. When he books in, do the report sick book and band book steps.

3 Book out and book in

Anyone who leaves camp for any reason other than an active MC or Warded status must be booked out. The record must also end at the right time. One form handles it all: **Book Out of Camp**.

3.1 The one form

Book Out of Camp

APPLY TO

One person...

Other options: Whole company (n) · Platoon 1..4 (n) · each program (n) · groups (n) · combined groups (n)

OUT OF CAMP FOR

Today only

Date range (leave)

Today only: counted out for the rest of today, automatically booked back in tomorrow.

Date range: logs a dated Leave / Out record with a Type, Start, End, and Days.

REASON / NOTES

MO / Appointment / NDP rehearsal...

Book out for today

Cancel

Today only is for same-day moves: sent to a hospital, an appointment, an errand. It clears at midnight. If the person is still away the next morning, he needs a new record, or should have had a date range from the start.

Date range (leave) is for anything longer. Pick a Type: *Off-in-Lieu, Annual Leave, Compassionate Leave, Weekend, Night's Out, Course, Guard Duty, NDP, Other*. Start and End are inclusive. The person counts as out for every day in the range. He counts back in from the day after End.

3.2 The four levers on a person's row

Button	When you press it
 Book out	He is stepping out of camp. Opens the form above.
 Book in	He came back from a same-day book-out before midnight. Reverses today's book-out. He counts present again now.
 Book in anyway	The app says he is out on MC or leave, but he is in camp today. Counts him present for today only. Shows <i>In camp · manual</i> .
 Undo book-in	You pressed a book-in button by mistake.

To change the dates of a leave record (early or late book-in), go to  and press  on the record. This opens **Edit Leave/Out Entry**. Adjust End and Days so the app books him back in on the right day.

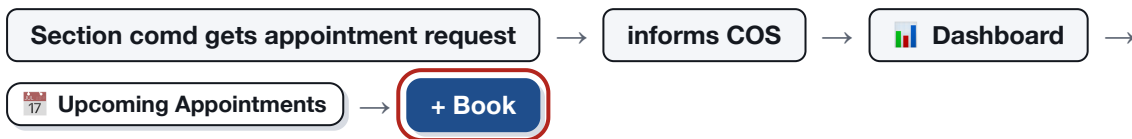

SCENARIO

MO sends a recruit out to CGH, with an escort commander

- 1 Book out the recruit, Today only.** Roster → his row →  → **Today only** → Reason: *Sent out to CGH from MO*. Strength is now correct while he is at the hospital.
- 2 Book out the escort commander the same way.** Reason: *CGH escort for C1203*. Commanders count in strength too. Miss the escort and the **COMMANDERS** line is wrong.
- 3 When the outcome comes back, update the recruit's medical entry.** Medical tab →  his Pending row → set **Warded** or **MC** with the real dates. From tomorrow, the medical status covers his absence in **ATTC**. The today-only book-out expires at midnight. No gap, no double count.
- 4 Update the commander's book-in timing.** If he returns tonight, press  on his row as soon as he is back. Any report after that shows him in camp. If he stays overnight with the recruit, book him out again in the morning, or log a Date range that covers the stay.

3.3 Medical appointments

Appointments follow a fixed chain. The section commander receives the appointment request. He informs the COS. The COS logs it in the app at once. The parade state then carries it under **MEDICAL APPT** until the day itself. No appointment lives only in someone's head.

Book Appointment

RECRUIT
REC Dalson · C1203

REASON
Knee specialist review
e.g. Knee specialist review / IPPT retake / Board...

DATE / TIME
22/05/2026 · 0930

LOCATION
CGH
e.g. MO Office / SAFTI MC / Camp HQ...

☒ Out of camp (recruit leaves camp for this appointment)
← tick this if he will leave camp for it

☐ Mark as resolved (hides from dashboard + parade state)

Book

After you press **Book**:

- The appointment shows on the Dashboard under  **Upcoming Appointments**, and in every parade state under **MEDICAL APPT**, until you resolve it.
- On the day, the row gets a **TODAY** badge and a one-tap  button. Press it when he leaves camp. It books him out with reason **Appt: <reason>**. In the parade state he moves to **OTHERS** as **<reason> (MA)**, with Location, Date, and Time.
- When he returns, press  on the same row.
- After the appointment is over, press  on the row. That marks it resolved and removes it from the dashboard and the parade state.
- If the appointment gave him a new status, log it in the Medical tab (Section 2.3).

The FP / LP modal also shows a checklist:  *Outside appointments today — tick = booked OUT of camp*. Use it to confirm who is really out at parade time.

SCENARIO

Knee specialist appointment, start to finish

On 16/05, Dalson's section commander receives an appointment slip: knee specialist review at CGH, 22/05 at 0930H. He informs the COS the same day. The COS logs it at once: Dashboard → , with **Out of camp** ticked. From 16/05 to 22/05, every parade state lists the appointment under **MEDICAL APPT**. No one is surprised on the day. On 22/05 at 0830H, Dalson leaves camp. The COS presses  on the appointment row. The morning parade state shows him under **OTHERS** as *Knee specialist review (MA)*. He returns at 1400H. The COS presses . The specialist gave him 2 weeks of Excuse Lower Limb, so the COS logs it in the Medical tab (Section 2.3). Last, the COS presses  on the appointment row to resolve it.

SCENARIO

Weekend: BMT stays in, PTP books out

- 1 **Book out PTP as a block.**  **Out / Leave** →  → **Apply to:** the PTP program → **Date range (leave)** → Type **Weekend** → Start Saturday, End Sunday. The app shows the head-count and skips anyone already out (on MC, on leave). Read that message. Make sure the number matches reality before you press  **Log leave / out**.
- 2 **Do nothing for BMT.** Never log people who stay in camp. Log movement only.
- 3 **Book-in timing.** With End = Sunday, everyone counts back in from Monday 0000H. Monday's First Parade State is then correct on its own. At Sunday-night book-in, check faces against the  **Out / Leave** list. If someone did not book in, extend his record (👉 → push End out) and chase him. The app must never say he is in camp when he is not.
- 4 **Exceptions in the block.** A PTP recruit staying in for the weekend: press  on him each day he is in, or 👉 his own leave record. A recruit back early on Sunday morning: 👉 his record, End = Saturday.

SCENARIO

Night's out

The company gets an evening out and is back by 2200H the same day. Use **Date range (leave)** with Type **Night's Out**. That type means same day, evening off camp. Scope: **Whole company** or the platoons going. Check everyone at book-in. The records close on their own after the day ends.

Booking out people who are already out

Bulk book-outs skip people who are already out on MC or leave, and tell you how many they skipped. If you book out one person who is already out, the app blocks you and says so. Never add a second record "to be safe". One person, one reason for being out. Double records break the strength count.

4 Logging conduct attendance

Log every conduct through the wizard, right after the conduct or during it.

Log Conduct

DATE / TIME (HHMM) / CONDUCT

16/05/2026 · 0730 · 8km Route March

PROGRAM / SCOPE

PTP

BMT

Combined

Narrower scope... (platoon / group / combined) dropdown below the pills. The scope drives the status list and Total Str.

STATUS PERSONNEL

☐

C1203 Dalson · LD + Excuse Lower Limb · *not participating*

Everyone in scope with an active status, auto-ticked (= not participating) if the status is restrictive. Tap a row to flip it if he actually takes part.

REPORT SICK

Dropped out mid-conduct AND went to the MO afterward. Auto-creates a Pending Medical row.

FALLOUT

Dropped out mid-conduct, did NOT go to the MO.

TOTALS

Total Str 45 · Status 3 · Rpt Sick 1 · Fallout 1 · Participating (auto) 40

Save + Copy chat

Cancel

1 **Header:** date, time in HHMM, and the conduct.

2 **Scope:** tap the program pill, or Combined. Narrow to a platoon, group, or combined group if the conduct is smaller. Scope sets the Total Str and the status list, so get it right first.

- 3 **Status Personnel:** the wizard lists everyone in scope with an active medical status. It auto-marks the restrictive ones (MC, LD, Excuses) as not participating. Check the list. Tap a row to flip it. Add a short reason where useful.
- 4 **Report Sick vs Fallout:** *Report Sick* means he dropped out and went to the MO. The app then creates a Pending Medical row for him. Handle it like any report sick (Section 2): book, Linktree, then upgrade when the outcome is back. *Fallout* means he dropped out and did not see the MO. Use per person, or for a whole group.
- 5 **Check the totals card.** Press . The WhatsApp message is copied for you. Paste it into the conduct chat. To copy it again later, press on the conduct's row.

SCENARIO

Route march, one man down mid-march

PTP does an 8km route march. REC Shaun falls out at 6km and is walked to the MO. In the wizard: scope pill **PTP**. The status list already shows Dalson (Excuse Lower Limb) marked out. Add Shaun under **Report Sick**. On save, the app tells you it created a Pending Medical row. That row is now a live report sick: book, Linktree form, and upgrade on the Medical tab when the MO gives him 2D LD. Forget this and tomorrow's parade state is wrong.

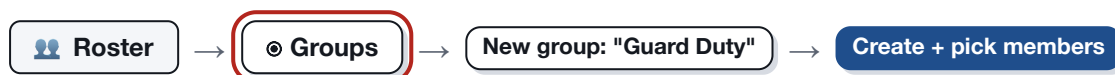

SCENARIO

Excused recruit insists he can participate

REC Qi Jun has Excuse Heavy Load. Today's conduct is a classroom lesson. The wizard auto-marks him as not participating. But he is sitting in the lesson. Tap his row to flip him to participating. The auto-mark is a default, not the truth. You confirm reality.

5 Groups

Groups are ad-hoc squads that cut across platoons: guard duty, details, rehearsal parties. Use them so bulk actions hit exactly the right people.

- **Groups:** name it, pick members, done. **Members** edits the list later. Deleting a group does not touch the members.
- **Combined groups** mix platoons, programs, and groups with + and -. Tap a chip once to include (+). Tap again to exclude (-). Example: tap *P4*, then tap *Guard Duty* twice. You get **P4 – Guard Duty**: all of Platoon 4 except guard duty.
- Groups show up as scopes in the **Book Out** form and the **conduct wizard**, and as a filter in the top bar.

SCENARIO

Guard duty draw

Eight recruits from three platoons go on guard duty at another camp, out Friday to Saturday. Create group **Guard Duty** with those eight. Book Out form → Apply to ☉ **Guard Duty (8)** → Date range → Type **Guard Duty** → Fri to Sat. For Saturday's PT, log the conduct with a scope like ■ **P4 – Guard Duty** where needed. Total Str is then right without hand-counting.

6 Generating the parade state

- 1 **Set Date and Time (HHMM).**
- 2 **Work the checklists.** The modal shows ⚠ *Borderline returnees: MC/Warded ended yesterday.* These people should be back in camp. Tick anyone who has **not** booked in yet. They stay in **ATTC**. The modal also shows today's appointments. This is the app asking you to confirm reality. Answer honestly.
- 3 **Press ↻ Regenerate** if you changed anything. Read the output top to bottom. Then **Copy to Clipboard** and paste into WhatsApp.

COUGAR COMPANY
FIRST PARADE STATE
DATE: 16/05/26 @ 0700

TOTAL STRENGTH: 120
CURRENT STRENGTH: 111
PLATOON 1: 27/28
PLATOON 2: 28/30
...
COMMANDERS: 14/15

ATTC: ... ← MC / Warded, physically away
REPORT SICK: ... ← Pending (at the MO, outcome unknown)
MEDICAL STATUS: ... ← LD, Excuses, consume-in-camp MC
MEDICAL APPT: ... ← upcoming appointments
OTHERS: ... ← leave + book-outs (weekend, CGH, escort, appt)

Before you send any parade state, run this check:

- Does **CURRENT STRENGTH** match your physical count? If not, a movement was not logged. Find it and log it. Do not bend the number.
- Is everyone in **ATTC** really away? Is everyone in **REPORT SICK** really at the MO?
- Is **OTHERS** exactly the set of people who booked out?

You can edit the text before copying. That is for the one-parade-state exception only: a typo in a reason, or a movement from 5 minutes ago that resolves within the hour. If you would need the same hand-edit twice, fix the data instead. If you cannot fix it in the data, contact **Youqi**.

The same menu gives you the  **Medical Status List** and  **MSK Report** when asked.

7 How the app counts strength (know this cold)

A person is out of camp today only if one of these three is true:

1. An active **MC or Warded** status covers today, and Consume in camp is not ticked. → shown in **ATTC**.
2. An active **leave / out record** covers today (Start ≤ today ≤ End). → shown in **OTHERS**.
3. A **same-day book-out** was pressed today. → shown in **OTHERS**. Clears at midnight.

CURRENT STRENGTH = **TOTAL STRENGTH** minus everyone above. So every wrong parade state is one missing or stale record in one of those three places. When a number looks off, check Medical, then Out / Leave, then today's book-outs, in that order.

8 Sync discipline

- Edits save locally first. Watch the  sync status at the top right. Where a tab offers **Push to Sheet** after edits, use it.
- Do not generate a parade state while another device still holds unsynced edits. One device: log, sync, then generate.
- If sync looks stuck, or two devices disagree, stop editing and contact **Youqi**. Do not fix a sync conflict by typing entries again. That creates duplicates.

9 Quick reference

When this happens	You press / do
Recruit reports sick	Medical → + Log Report Sick → status Pending , dates blank. Sign report sick book. Linktree form. Send list to Dr. Nigel in format.
He returns with MC / status	Get chit photo, cross-check. Medical →  → real status + Start/End (use + Add another status for multiples). Sign out of book. Band book if applicable.
MO clears him with nothing	Medical →  → status NIL . Sign out of book.
MC consumed in camp	Status MC + tick Consume in camp (counts in strength, listed under MEDICAL STATUS).
Sent out to hospital (CGH) from MO	Book out recruit Today only + book out escort commander. Later:  medical entry to MC/Warded;  Book in the commander when back.
Appointment request received (via section comd)	Dashboard →  Upcoming Appointments → + Book . Tick Out of camp if he leaves camp for it. Shows under MEDICAL APPT.
Appointment day	Press  Out on the appointment row when he leaves.  Book in on return.  to resolve after. Log any new status.
Weekend book-out (partial company)	Out / Leave → + Log → scope = the program/platoon/group going out → Date range → Type Weekend . Stayers: log nothing. Verify at book-in;  records for stragglers.
Person on leave/MC is physically in camp	 Book in anyway (today only, shows In camp · manual).
Leave dates change (early/late book-in)	Out / Leave →  → adjust End (and Days).
Conduct happens	Attendance → + Log Conduct → scope → review Status Personnel → Report Sick / Fallout →  Save + Copy chat .
Fell out mid-conduct, went to MO	Wizard  Report Sick section (auto-creates Pending) → then full report sick loop.
Fell out mid-conduct, no MO	Wizard  Fallout section.
Ad-hoc squad (guard duty, detail)	Roster →  Groups → create, pick members. Use as scope everywhere.
FP / LP due	Dashboard →  Generate Report ▼ → answer Borderline returnees honestly → verify strength vs physical count → Copy.
Anything the app cannot represent	Contact Youqi . Do not improvise.

HANDOVER STANDARD

You hand over duty with the app matching reality exactly. The report sick book and band book match the Medical tab. No unlogged movements. The next COS should be able to generate a parade state in their first minute of duty and send it without checking anything. That is the standard, because that is what you received.
