

COS Guide

What to enter each day so the generated parade state is correct: medical statuses, leaves and outs, book-in/book-out, and verifying that conduct attendance was logged.

RESPONSIBILITY

Keep the parade state correct. The app builds it from four data streams you own: medical statuses, leaves and outs, book-in/book-out, and conduct attendance. Get those right and the parade state follows.

MORNING BEFORE FIRST PARADE

- Open **Dashboard** → read the Strength Board.
- Enter any **overnight MCs / statuses**.
- Reconcile **Currently Out of Camp** vs. reality.
- **Book out** anyone physically leaving today.

DAY AS THINGS CHANGE

- New report-sick / MO trips → **Medical** + book out.
- Recruit returns to camp → **Book In**.
- Confirm the CSO **logged each conduct**.
- Log **leave / night's out / weekend**.

PARADE BEFORE SENDING

- **Generate Report** → **First/Last Parade State**.
- Resolve **borderline returnees** (tick in/out).
- Confirm **appointment camp toggles**.
- **Copy** → paste into the battalion chat.

MODEL How the app decides who is "out of camp". One rule, used everywhere: **active MC / Warded** + **active leave** + **manual book-out**. If someone qualifies more than once, precedence is **medical > leave > book-out**. The Dashboard and the parade state read this same rule, so the Strength Board's "In Camp" count and the parade's CURRENT STRENGTH always match. Book-outs auto-clear the next day.

A · DAILY Morning Strength Check

Your first check each morning. If a number on the Strength Board looks wrong, a record behind it is wrong. Fix it now, not at parade time.

4D	NAME	WHY	DETAIL
C1421	REC TAN	Medical	MC 03–05 Jul via medical
C1408	REC LIM	Leave	Off-in-Lieu via leave
C1433	REC WONG	Booked out	Appt: dental + Book In

↑ The **Why** column shows the source. **Medical** and **Leave** rows come from their own records; you don't book those in or out here. Only **Booked out** (amber) rows carry a one-tap ↺ **Book In**.

- 1 **Out of Camp** must match who is physically not in camp right now.
- 2 Every name in **Currently Out of Camp** should be genuinely away. A name that's actually present is wrong: book them in, or shorten the MC/leave.
- 3 Anyone away but **not** listed is missing. Add a book-out, medical record, or leave, whichever is true.

TEST If the Strength Board matches the parade square, the parade state will too. This is the cheapest place to catch an error.

B · IN/OUT Book-Out & Book-In

Book-out is your manual control over who is physically in camp today. Use it for same-day

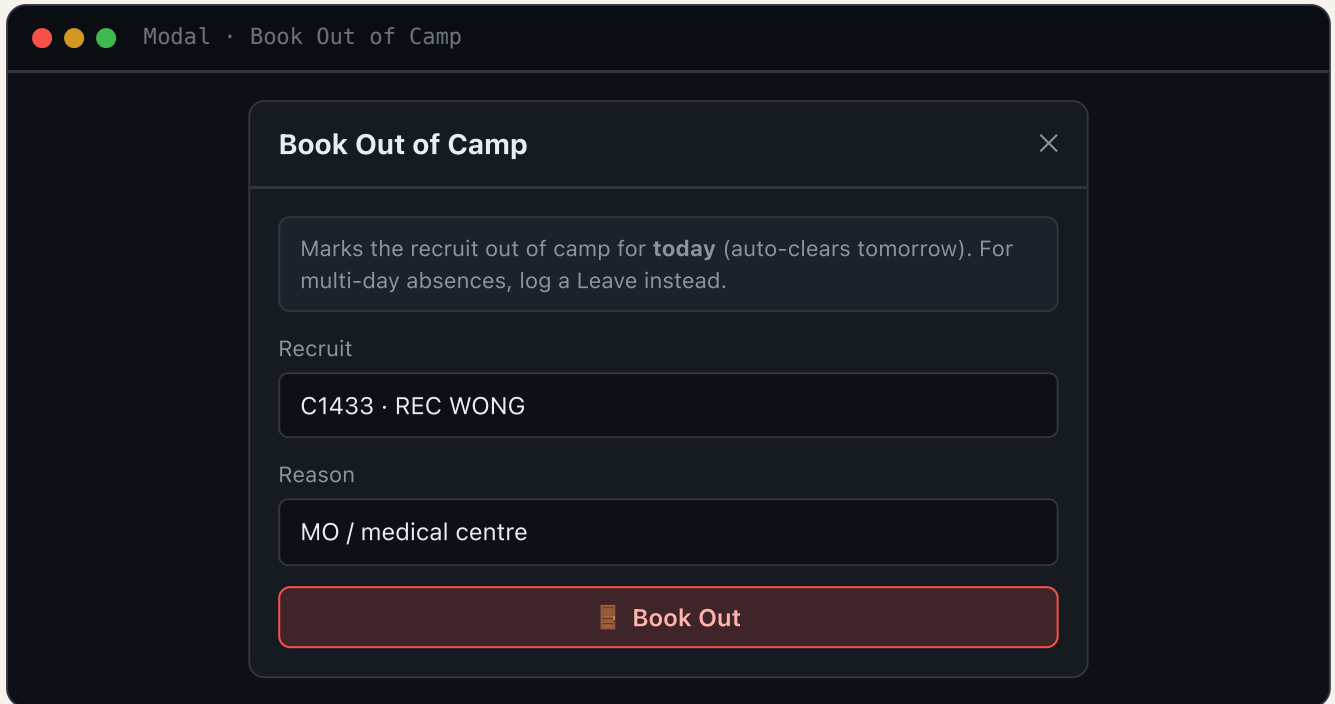

absences that aren't an MC or leave: MO trips, appointments, errands.

MOST COMMON

A recruit leaves camp for an MO trip / appointment, then comes back

When: recruit heads out to the medical centre or an external appointment and will return the same day.

- 1 On the Dashboard, tap **+ Book Out** above the Out-of-Camp list.
- 2 Pick the recruit, type a short **reason** (**MO** , **Dental** , **Appointment**), tap  **Book Out**.

- 1 The recruit now shows **Booked out** and drops out of the In-Camp count immediately.
- 2 When they return, tap  **Book In** on their row. They rejoin the In-Camp count.

AUTO Forgot to book someone in? A book-out only counts for the day it was made and is **ignored the next day**. Nothing to clean up overnight.

EDGE CASE

Someone on an active MC is actually in camp today (light duties / came back early)

When: a recruit's MC/Warded record still covers today, but they're in camp and you want the count to show it.

- 1 Open the recruit (search their 4D, or tap their row).

2

Tap ↩ **Book In** on their profile. Since the MC still makes them "out", the app sets a one-day **present override** rather than clearing a book-out.

Profile · REC TAN · C1421

IN CAMP (MANUAL)

override on MC · MC 03–05 Jul still shown under Medical Status

↩ **Book In**

WHY

The teal **IN CAMP (MANUAL)** pill means counted in strength today, with the MC record untouched and still listed in the parade state's MEDICAL STATUS block. You're fixing the headcount, not the status. Auto-clears the next day.

DON'T

Don't book out for a multi-day absence. Book-out lasts one day. For anything spanning nights (block leave, hospitalisation, a course), use a **Medical** or **Leave / Out** record so it holds across every correct day.

C · MEDICAL Medical Statuses

Every report-sick outcome lives in the **Medical** tab. The status you record here decides whether a recruit counts as away, in-camp restricted, or active, and it feeds the MC / Warded / Pending sections of the parade state.

- 1 Go to 📄 **Medical** → **+ Add**. Enter **4D**, **date**, **reason**, and pick the **status**.
- 2 Set **Start** and **End** dates (both inclusive). The recruit is treated as on that status for the whole range.
- 3 For **MC** or **Warded**, leave "Consume in camp" unticked so they count as out of camp. Tick it only if they serve the MC in camp.

Modal · Add Report-Sick Record

Away from camp

MC, Warded. Out of camp, listed in the parade ATTC / medical block, drop the In-Camp count.

In camp, restricted

LD, Excuse-X family. Stay in camp (counted in strength) but non-active. Never book these out.

Awaiting MO

Pending. Active only on its start date; set the real status once the MO decides.

Cleared

NIL. Saw the MO, no status given. Counts as active and in camp.

AUTO **Ghost tags are automatic.** After an MC or LD ends, the Dashboard lists the recruit under **Recovering** with an **MC+1** / **MC+2** tag for the two trailing days. Just record the true start/end dates.

D · LEAVE Leaves & Outs

Multi-day or scheduled absences go in  **Leave / Out**, not book-out. A leave record holds the recruit out of camp for the right span and feeds the parade state's OTHERS block.

- 1 Go to  **Leave / Out** → + Add.
- 2 Pick the **type**, set **start/end** dates. **Days auto-calculate** but stay editable for half-days.
- 3 The recruit shows **Leave** in the Out-of-Camp list for every covered day, then returns automatically.

TYPES Leave · Compassionate · Off-in-Lieu · Weekend · **Night's Out** (same-day evening off-camp) · Course · Guard Duty · NDP · Other. Only **Off-in-Lieu** draws down a commander's leave quota.

E · VERIFY Confirm the CSO Logged Each Conduct

The CSO logs conduct attendance through the wizard. You verify it happened and the numbers make sense. A conduct that was run but never logged is a hole in the company's participation and safety record.

- 1 Open  **Attendance**. Every logged conduct is one row, newest first.
- 2 **Cross-check against the day's programme**. Every conduct run should have a row at the right date and time. A missing row means it wasn't logged. Chase the CSO.
- 3 Check each row: does **Total** match the strength that trained? Are **Rate** and **Fallout** plausible? Red rates and unexplained fallout need a second look.
- 4 If something's off, tap  to reopen the wizard and correct it, or tell the CSO to. Use **Remarks** for any caveat.

Attendance · one row per conduct							
DATE	TIME	CONDUCT	TOTAL	PART.	FALLOUT	RATE	REMARKS
03 Jul	0730 Hrs	Strength Circuit	36	34	0	94%	—
03 Jul	1500 Hrs	Route March 8km	36	31	2	86%	2 fell out, heat

? If the day's programme had a **third** conduct and only these two appear, the third was never logged. That's the gap this check catches.

FLOW A logged conduct also writes each **Report Sick** row as a **Pending** medical record. It lands in your Medical tab for you to finalise once the MO decides, so verifying attendance and closing out medicals are one loop.

F · OUTPUT Generate the Parade State

Once your data is right, the parade state assembles itself. You only resolve the few calls the app can't make for you.

- 1 Dashboard →  **Generate Report** ▾ → **First Parade State** (or Last).
- 2 Set the **date** and **parade time**.
- 3 **Borderline returnees**: recruits whose status ends near parade time appear with a checkbox. Tick means still out for this parade. Decide each one.
- 4 **Appointment camp toggles**: tick whether each appointment-holder is out of camp. An out-of-camp appointment shows under OTHERS, not the medical-appointment line.

5

Read the generated text; it's **editable** for last-minute fixes. Tap  **Copy to Clipboard** and paste into the battalion chat.

RECAP TOTAL STRENGTH is the whole roster. CURRENT STRENGTH is TOTAL minus everyone the **out-of-camp** rule says is away. If CURRENT looks wrong, the fix isn't in this window: correct a medical, leave, or book-out record, then regenerate.

✓ COS Golden Rules

Reconcile the board every morning

The cheapest place to catch a wrong number. If the Strength Board is right, the parade state is right.

Book-out is a one-day tool

Same-day errands only. Multi-day goes in Medical or Leave. It auto-clears, so book-in is a courtesy, not a must.

No row means not logged

Cross-check the Attendance tab against the day's programme. A missing conduct is your cue to chase the CSO.

Fix the source, not the output

A wrong parade state is always a wrong record upstream. Correct the record, then regenerate.

You almost never save

Edits auto-push. Watch the sync pill: green is saved, tap it to retry if it's red.

Handoff

CS0

Logs each conduct

Runs the wizard after every session. Report-sick rows auto-create Pending medical records.

COS

Verifies & finalises

Confirms every conduct has a row and totals make sense. Finalises the Pending medicals the MO decides on.

THE SYSTEM

Correct parade state

One out-of-camp rule, one set of totals. The parade state assembles itself and matches the ground.

Cougar Data System · COS guide. Fix the source, not the output: if a number is wrong, a record upstream is wrong.
